UNIVERSITY PRESS

Online Resources

- From Oxford University Press

This presentation gives a brief description of Oxford Academic Journals.

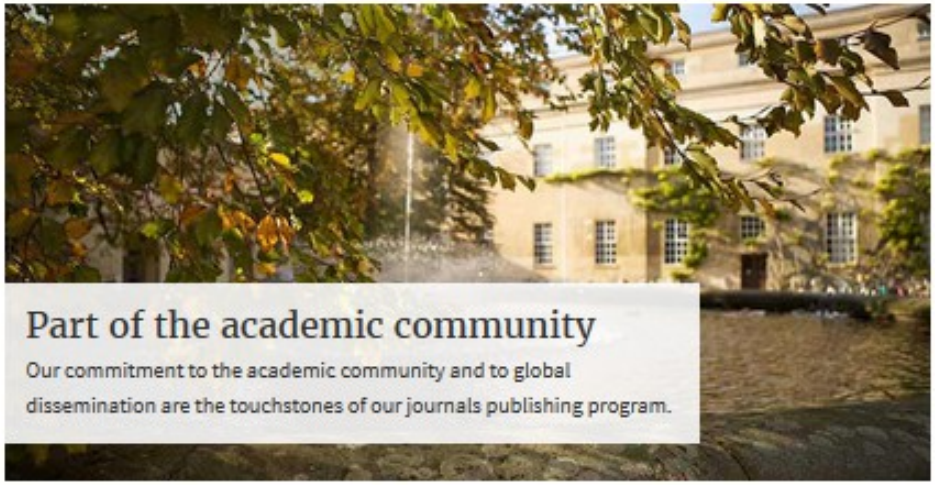

It tells you

- what Oxford Academic Journals are
- how they can help you
- how to look for information in them

The presentation will take about 5 minutes.

A trusted society partner

Oxford Academic publishes more than 200 journals on behalf of learned societies around the world.

Open access

We are mission-driven to facilitate the widest possible dissemination of high-quality research.

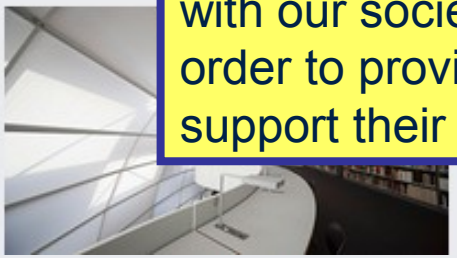

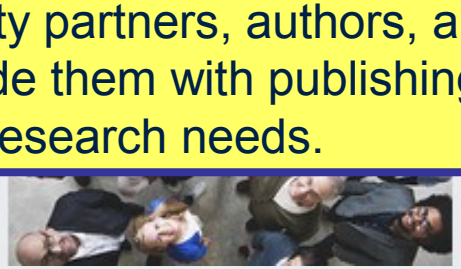

Altmetric scores

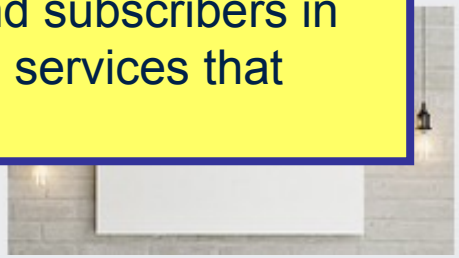

We use altmetrics to highlight a paper's impact within and beyond the academic sphere.

Oxford University Press (OUP) publishes the highest quality journals and delivers this research to the widest possible audience. We achieve this by working closely with our society partners, authors, and subscribers in order to provide them with publishing services that support their research needs.

Oxford University Press (OUP) is mission-driven to facilitate the widest possible dissemination of high-quality research. We embrace both green and gold open access (OA) publishing to support this mission.

To view the fully Open Access journals list, please click on the 'Open access' tab.

ources for...

https://academic.oup.com/journals

OXFORD UNIVERSITY PRESS

Supporting the evolution of Open Access publishing

Sustainable, high-quality OA publishing requires either funding to be available to pay for Article Processing Charges, sponsorship, or suitable embargo periods. This limits which journals, disciplines, and fields can shift to OA, a process that requires the support of the relevant research community, scholarly societies, and associations.

For the foreseeable future, we expect a mixed business model publishing industry. In some areas, gold OA will be the best option; in others it will be the subscription model, with provision for green OA after specified periods. As the academic and professional communities evolve and adjust this mix, OUP will continue to drive and support progress in this area.

OUP operates two different open access models:

- An **optional open access** model (*Oxford Open*) for the majority of our journals. Please see the individual journal home pages to find out whether they offer optional open access.
- OUP also publish fully open access journals

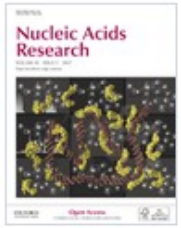

Overview of optional Open Access

Memory, Decision-Making, and the Ventromedial Prefrontal Cortex (vmPFC): The Roles of Subcallosal and Posterior Orbitofrontal Cortices in Monitoring and Control Processes

Melissa Hebscher ✉; Moran Barkan-Abramski; Morris Goldsmith; Judith Aharon-Peretz; Asaf Gilboa

Cereb Cortex (2016) 26 (12): 4590-4601. **DOI:** https://doi.org/10.1093/cercor/bhv220
Published: 26 December 2016

Abstract

The ventromedial prefrontal cortex (vmPFC) prominently and separately [illegible]sion-making (e.g., value-[illegible] veracity-monitoring). Recent [illegible]dgments that inherently comprise of second-order confidence estimates. These demonstrate quadratic relationships with first-order judgments and are automatically encoded in vmPFC activity. Memory studies use Quantity–Accuracy Profiles to capture similar first-order and second-order meta-mnemonic processes, suggesting convergence across domains. Patients with PFC damage answered general knowledge questionnaires under 2 conditions. During forced report, they chose an answer and rated the probability of it being correct (first-order "monitoring"). During free report, they could choose to volunteer or withhold their

Accuracy Profiles to capture similar first-order and second-order meta-mnemonic processes, suggesting convergence across domains. Patients with PFC damage answered general knowledge questionnaires under 2 conditions. During forced report, they chose an answer and rated the probability of it being correct (first-order "monitoring"). During free report, they could choose to volunteer or withhold their previous answers (second-order "control") to maximize performance. We found quadratic relationships between first-order and second-order meta-mnemonic processes; voxel-based lesion-symptom mapping demonstrated that vmPFC damage diminished that relationship. Furthermore, damage to subcallosal vmPFC was specifically associated with impaired monitoring and additional damage to posterior orbitofrontal cortex led to deficient control. In decision-making, these regions typically support valuation and choice, respectively. Persistent spontaneous confabulation (false memory production) confirmed the clinical relevance of these dissociations. Compared with patients with no confabulation history, patients who currently confabulate were impaired on both monitoring and control, whereas former confabulators demonstrated impaired monitoring but intact control.

Published: 26 December 2016

Abstract

The ventromedial prefrontal cortex (vmPFC) prominently and separately features in neurobiological models of decision-making (e.g., value-encoding) and of memory (e.g., automatic veracity-monitoring). Recent decision-making models propose value judgments that inherently comprise of second-order confidence estimates. These demonstrate quadratic relationships with first-order judgments and are automatically encoded in vmPFC activity. Memory studies use Quantity–Accuracy Profiles to capture similar first-order and second-order meta-mnemonic processes, suggesting convergence across domains. Patients with PFC damage answered general knowledge questionnaires under 2 conditions. During forced report, they chose an answer and rated the probability of it being correct (first-order "monitoring"). During free report, they could choose to volunteer or withhold their previous answers (second-order "control") to maximize performance. We found quadratic relationships between first-order and second-order meta-mnemonic processes; voxel-based lesion-symptom mapping demonstrated that vmPFC damage diminished that relationship. Issue Section: Articles

Between 1813 and 1860, Jean-Auguste-Dominique Ingres made five paintings and one signed drawing and supervised the production of four prints, all on the theme of the Renaissance master Raphael and his legendary lover and portrait subject, the Fornarina (Fig. 1). At his death in 1867 a final painted version remained unfinished. Even at that late date the artist's investment in what clearly was a particularly meaningful subject for him remained undiminished: Ingres wrote that he hoped this 'dernière édition' would erase the memory of those that preceded it.[1] These pictures have attracted considerable artistic interest and art-historical interpretation. Recognised, on the one hand, as prime examples of Ingres's habitual working method, based
